COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

ASP.NET

Module 6

Controllers

Label, Textbox, Button, RadioButton, and
DropDownList

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

I. Preparations

At the end of this module students will:

- Set the properties of the controllers
- implement the Label, Textbox, Button, RadioButton, Checkbox and Dropdown List controllers.

II. Presentation

Label Controller

This control is used to display textual information on the web forms. It is mainly used to create caption for the other controls like: textbox.

To create label either we can write code or use the drag and drop facility of visual studio 2017.

This is server side control, asp provides own tag to create label. The example is given below.

```
<asp:LabelID="Label1" runat="server" Text="Label" ></asp:Label>
```

Property	Description
AccessKey	It is used to set keyboard shortcut for the label.
TabIndex	The tab order of the control.
BackColor	It is used to set background color of the label.
BorderColor	It is used to set border color of the label.
BorderWidth	It is used to set width of border of the label.
Font	It is used to set font for the label text.
ForeColor	It is used to set color of the label text.
Text	It is used to set text to be shown for the label.
ToolTip	It displays the text when mouse is over the label.
Visible	To set visibility of control on the form.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

Height	It is used to set height of the control.
Width	It is used to set width of the control.

Textbox Controller

This is an input control which is used to take user input. To create **TextBox** either we can write code or use the drag and drop facility of visual studio IDE.

This is server side control, asp provides own tag to create it. The example is given below.

`< asp:TextBoxID="TextBox1" runat="server" ></asp:TextBox>`

Property	Description
AccessKey	It is used to set keyboard shortcut for the control.
TabIndex	The tab order of the control.
BackColor	It is used to set background color of the control.
BorderColor	It is used to set border color of the control.
BorderWidth	It is used to set width of border of the control.
Font	It is used to set font for the control text.
ForeColor	It is used to set color of the control text.
Text	It is used to set text to be shown for the control.
ToolTip	It displays the text when mouse is over the control.
Visible	To set visibility of control on the form.
Height	It is used to set height of the control.
Width	It is used to set width of the control.
MaxLength	It is used to set maximum number of characters that can be entered.
ReadOnly	It is used to make control readonly.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

Button Controller

This control is used to perform events. It is also used to submit client request to the server. To create **Button** either we can write code or use the drag and drop facility of visual studio IDE.

This is a server side control and asp provides own tag to create it. The example is given below.

```
<asp:ButtonID="Button1" runat="server" Text="Submit" BorderStyle="Solid" ToolTip="Submit"/>
```

Property	Description
AccessKey	It is used to set keyboard shortcut for the control.
TabIndex	The tab order of the control.
BackColor	It is used to set background color of the control.
BorderColor	It is used to set border color of the control.
BorderWidth	It is used to set width of border of the control.
Font	It is used to set font for the control text.
ForeColor	It is used to set color of the control text.
Text	It is used to set text to be shown for the control.
ToolTip	It displays the text when mouse is over the control.
Visible	To set visibility of control on the form.
Height	It is used to set height of the control.
Width	It is used to set width of the control.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

RadioButton

It is an input control which is used to takes input from the user. It allows user to select a choice from the group of choices. To create **RadioButton** we can drag it from the toolbox of visual studio.

This is a server side control and ASP.NET provides own tag to create it. The example is given below.

```
<asp:RadioButtonID="RadioButton1" runat="server" Text="Male"  
GroupName="gender"/>
```

Property	Description
AccessKey	It is used to set keyboard shortcut for the control.
TabIndex	The tab order of the control.
BackColor	It is used to set background color of the control.
BorderColor	It is used to set border color of the control.
BorderWidth	It is used to set width of border of the control.
Font	It is used to set font for the control text.
ForeColor	It is used to set color of the control text.
Text	It is used to set text to be shown for the control.
ToolTip	It displays the text when mouse is over the control.
Visible	To set visibility of control on the form.
Height	It is used to set height of the control.
Width	It is used to set width of the control.
GroupName	It is used to set name of the radio button group.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

DropDownList Controller

The DropDownList is a web server control which is used to create an HTML Select component. It allows us to select an option from the dropdown list. It can contain any number of items

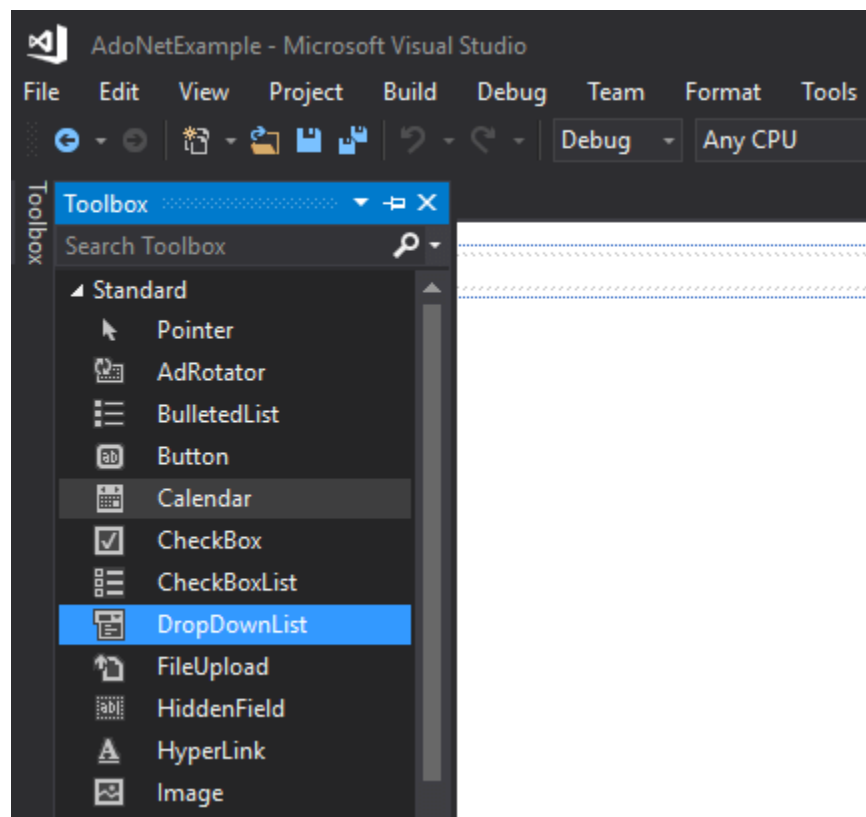

ASP.NET provides a tag to create DropDownList for web application. The following is the Syntax of DropDownList tag.

```
<asp:DropDownList id="DropDownList1" runat="server"
    DataSource="<% databindingexpression %>"
    DataTextField="DataSourceField"
    DataValueField="DataSourceField"
    AutoPostBack="True|False"
    OnSelectedIndexChanged="OnSelectedIndexChangedMethod">
  <asp:ListItem value="value" selected="True|False">
    Text
  </asp:ListItem>
</asp:DropDownList>
```

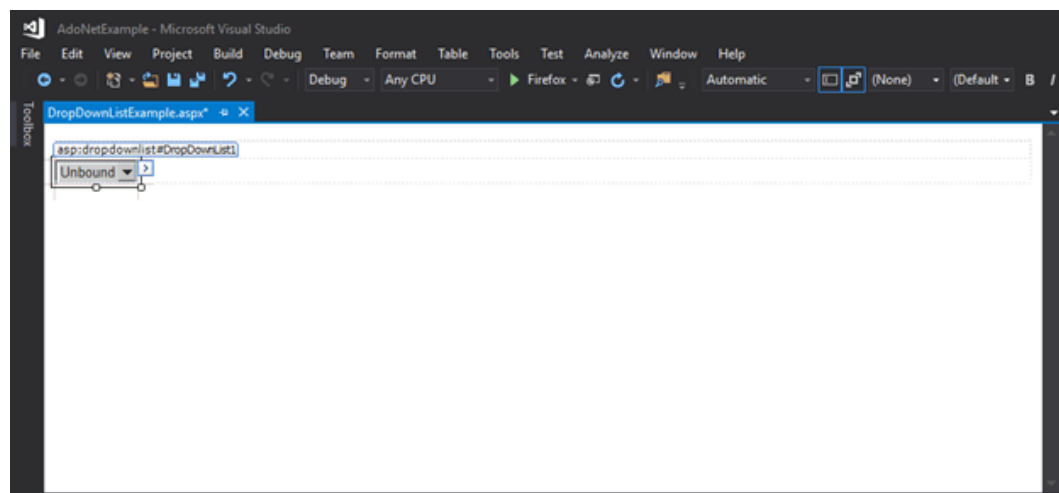

Initially, it is an empty form. Now, we will add a new DropDownList by dragging it from the toolbox.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

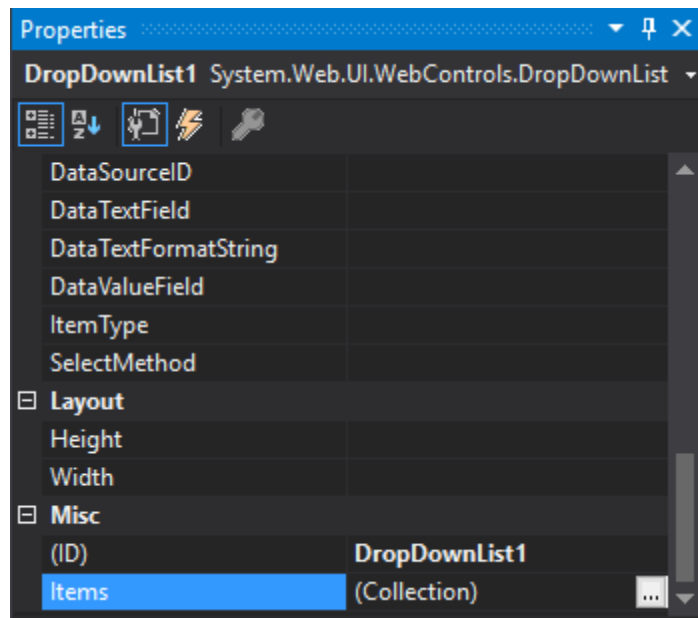

After dragging, our web form looks like the below.

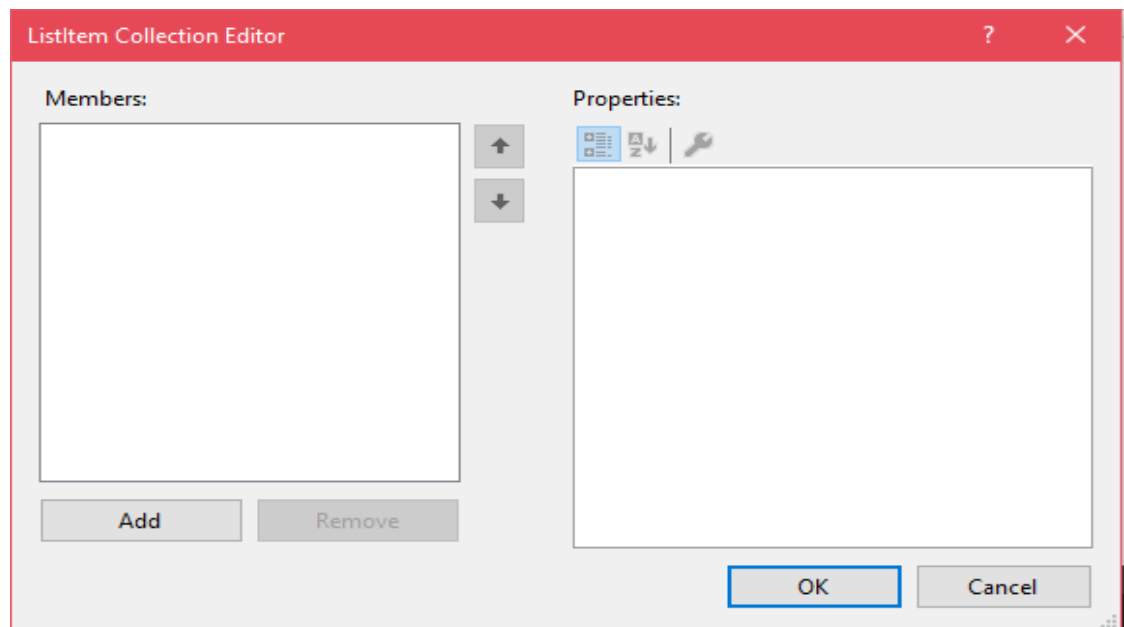

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

Now, to add items to the list, visual studio provides **Items** property where we can add items. The property window looks like this.

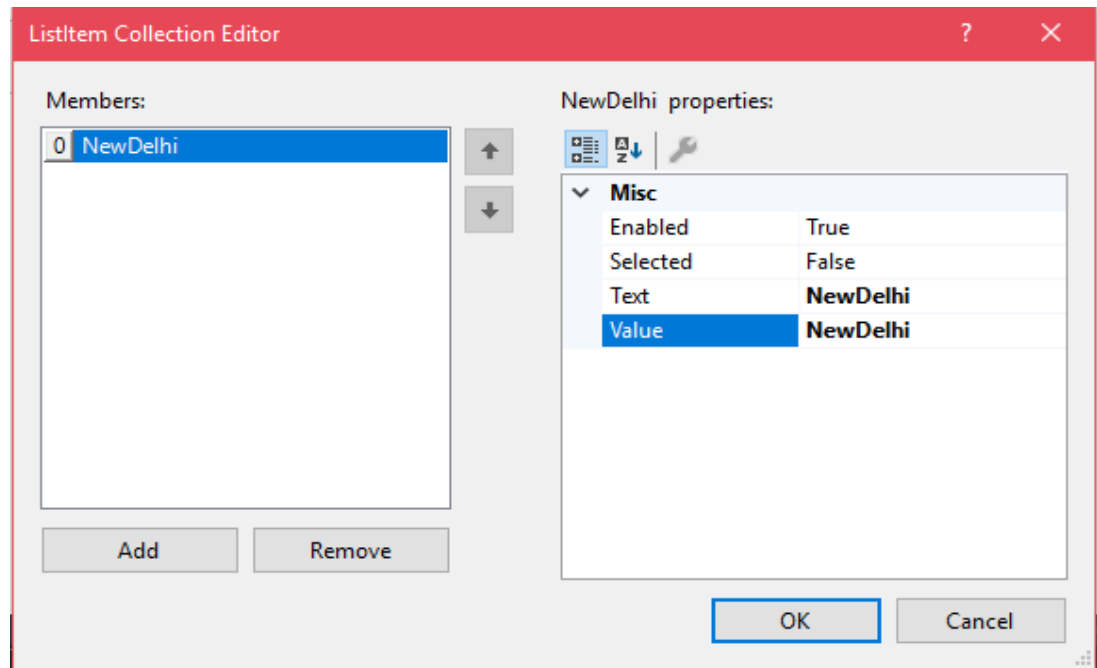

Click on the items (collection) and it will pop up a new window as given below. Initially, it does not have any item. It provides **add** button to add new items to the list.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

Adding item to the DropDownList, by providing values to the Text and Value properties.

ListItem Collection Editor

Members:

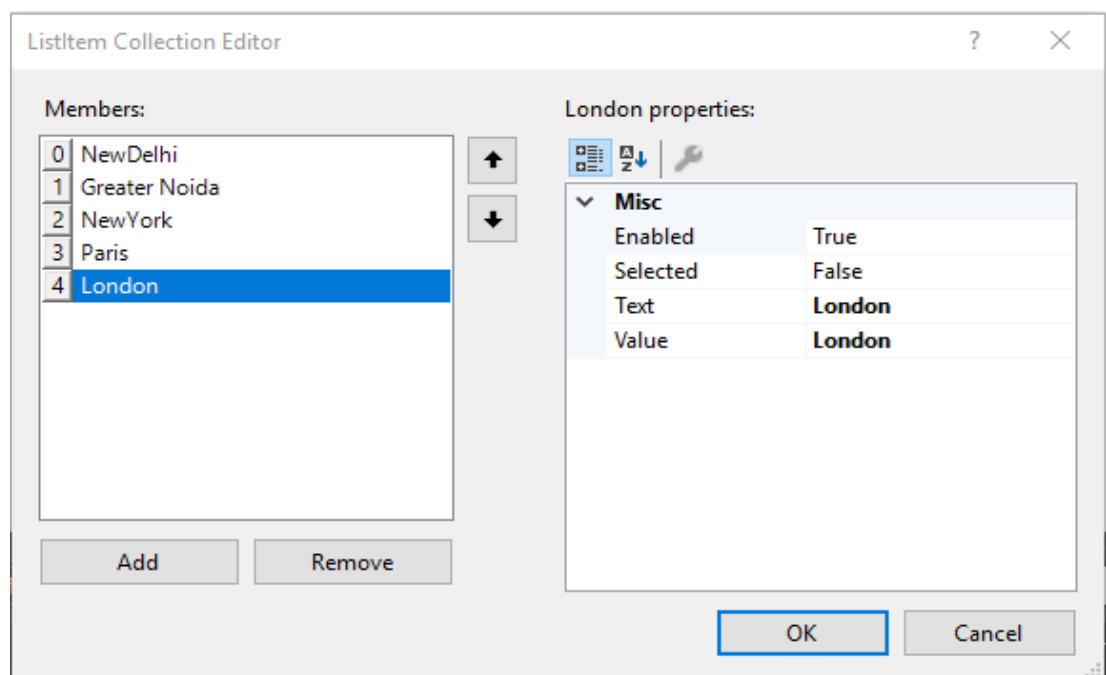

0	NewDelhi
---	----------

NewDelhi properties:

Misc	
Enabled	True
Selected	False
Text	NewDelhi
Value	NewDelhi

Buttons: Add, Remove, OK, Cancel

We have added more items to it and now, it looks like the following.

ListItem Collection Editor

Members:

0	NewDelhi
1	Greater Noida
2	NewYork
3	Paris
4	London

London properties:

Misc	
Enabled	True
Selected	False
Text	London
Value	London

Buttons: Add, Remove, OK, Cancel

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

After clicking OK,

Select a City of Your Choice

Please Select

- Please Select
- New Delhi
- Greater Noida
- NewYork**
- Paris
- London

At server side, selected city is fetched and display to the user.

localhos 120%

Select a City of Your Choice

NewYork

Your Choice is: NewYork

All server side control has its own properties and events. below list shows basic properties of Dropdownlist control.

COLLEGE OF COMPUTER, INFORMATION AND COMMUNICATIONS TECHNOLOGY

Properties	Description
ID	Identification name of control.
BackColor	It is used to set background color of control.
ForeColor	It is used to set text color of the control.
ToolTip	It displays a text on control when mouse over on it.
TabIndex	It is used manage tab order of control.
CssClass	It is used to apply style on control.
Enable	true/false – used to enable or disable control.
Enable Theming	true/false – It is used to enable or disable effect of theme on control.
CausesValidation	true/false – It is used to enable or disable validation effect on control
Visible	true/false – It is used to hide or visible control on web page.

Below lists show important properties of Dropdownlist control, which is use in programming side.

Properties	Description
Items	It shows the collection of item in the Dropdownlist.
DropDownList1.Items.Count	Return the total count of items in the dropdownlist.
DropDownList1.Items.Add("ItemName")	Add the new item in to the dropdownlist control.
